

Sharing resources between free/open-source rule-based machine translation systems: Grammatical Framework and Apertium

Grégoire Détrez, Víctor M. Sánchez-Cartagena, Aarne Ranta

Friday 30 May 2014

GF & Apertium

Two machine translation platforms

- ▶ Rule based
- ▶ Open Source
- ▶ actively developed

But using different intermediate representation.

Example of translation in GF

Input

the red cars

Example of translation in GF

Input > English concrete tree

Figure : English concrete tree obtained after parsing

Example of translation in GF

Input > English concrete tree > Abstract syntax tree

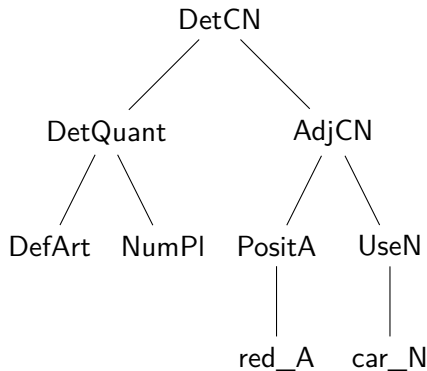

Figure : Abstract syntax tree

Example of translation in GF

Input > English concrete tree > Abstract syntax tree > Spanish concrete tree

Figure : Spanish concrete tree

Example of translation in GF

Input > English concrete tree > Abstract syntax tree > Spanish concrete tree >
Linearization

los coches rojos

Apertium translation

Input

the red cars

Apertium translation

Input > Intermediate representation

the.**det**.def *red*.**adj** *car*.**n**.pl

Apertium translation

Input > Intermediate representation > Transfer

the.**det**.def *red*.**adj** *car*.**n**.pl

Apertium translation

Input > Intermediate representation > Transfer

the.**det**.def *red*.**adj** *car*.**n**.pl

Apertium translation

Input > Intermediate representation > Transfer

el.det.def *red.adj* *car.n.pl*

Apertium translation

Input > Intermediate representation > Transfer

el.**det**.def **rojo.adj** **coche.n.m**.pl

Apertium translation

Input > Intermediate representation > Transfer

el.**det**.def **rojo.adj** **coche.n.****m**.pl

Apertium translation

Input > Intermediate representation > Transfer

el.**det**.def *coche*.**n**.m.pl *rojo*.**adj**

Apertium translation

Input > Intermediate representation > Transfer

Apertium translation

Input > Intermediate representation > Transfer > linearization

los coches rojos

How can we share/reuse resources?

Contributions

- ▶ An experiment in reusing resources between free and open source rule based machine translation systems
- ▶ A method for creating shallow transfer rules from parallel grammars

Apertium → GF: Sharing lexicon

- ▶ Import the lexicon from Apertium to GF

Apertium → GF: Sharing lexicon

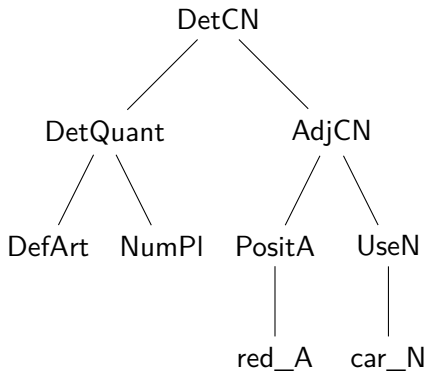

- ▶ Import the lexicon from Apertium to GF
- ▶ Different format

Apertium → GF: Sharing lexicon

- ▶ Import the lexicon from Apertium to GF
- ▶ Different format
- ▶ Missing information: smart-paradigms

GF \rightarrow Apertium: Apertium rules from the RGL

Abstract syntax tree

GF \rightarrow Apertium: Apertium rules from the RGL

Original linearizations

the red cars \rightarrow el coches rojos

GF → Apertium: Apertium rules from the RGL

Replacing tokens with lexical forms

the.**det**.def *red*.**adj** *car*.**n**.pl → *el*.**det**.def.m.pl *coche*.**n**.m.pl
rojo.**adj**.m.pl

GF → Apertium: Apertium rules from the RGL

Generalizing over nouns and adjectives

any (plural) noun with a masculine translation

the.**det**.def **adj** n.pl|m.pl → *el*.**det**.def.m.pl n.m.pl **adj**.m.pl

any adjective

GF \rightarrow Apertium: Apertium rules from the RGL

Alignment template

the.**det**.def **adj** **n**.pl|m.pl \rightarrow *el*.**det**.def.m.pl \$3.**n**.m.pl \$2.**adj**.m.pl

GF \rightarrow Apertium: Apertium rules from the RGL

Alignment template

the.**det**.def **adj** **n**.pl|m.pl \rightarrow *el*.**det**.def.m.pl \$3.**n**.m.pl \$2.**adj**.m.pl

Evaluation

Corpora:

- ▶ *newtest2011A* (1896 sentences) sentences which can be parsed (either fully or partially) by GF (in a reasonable time)
- ▶ *newtest2011B* (130 sentences) sentences fully parsed by GF

Systems:

- ▶ *sharedApertium* is an Apertium-based system containing the original Apertium lexicon and a set of shallow-transfer rules created from the GF RGL
- ▶ *sharedGF* is a GF-based system in which the lexicon has been ported from Apertium
- ▶ *Apertium word-for-word* Apertium system using only the bilingual dictionary
- ▶ *Apertium* Apertium system with manually created rules

Evaluation

Corpus	System	BLEU	METEOR	TER
<i>A</i>	sharedGF	0.027	0.181	0.847
	sharedApertium	<u>0.138</u>	<u>0.390</u>	<u>0.678</u>
	Apertium word-for-word	0.111	0.368	0.703
	Apertium	0.200	0.443	0.617
<i>B</i>	sharedGF	<u>0.152</u>	<u>0.388</u>	<u>0.703</u>
	sharedApertium	<u>0.148</u>	<u>0.391</u>	<u>0.691</u>
	Apertium word-for-word	0.106	0.361	0.713
	Apertium	0.212	0.451	0.620

Thanks!
